Regularizing your neural network

Regularization

Logistic regression

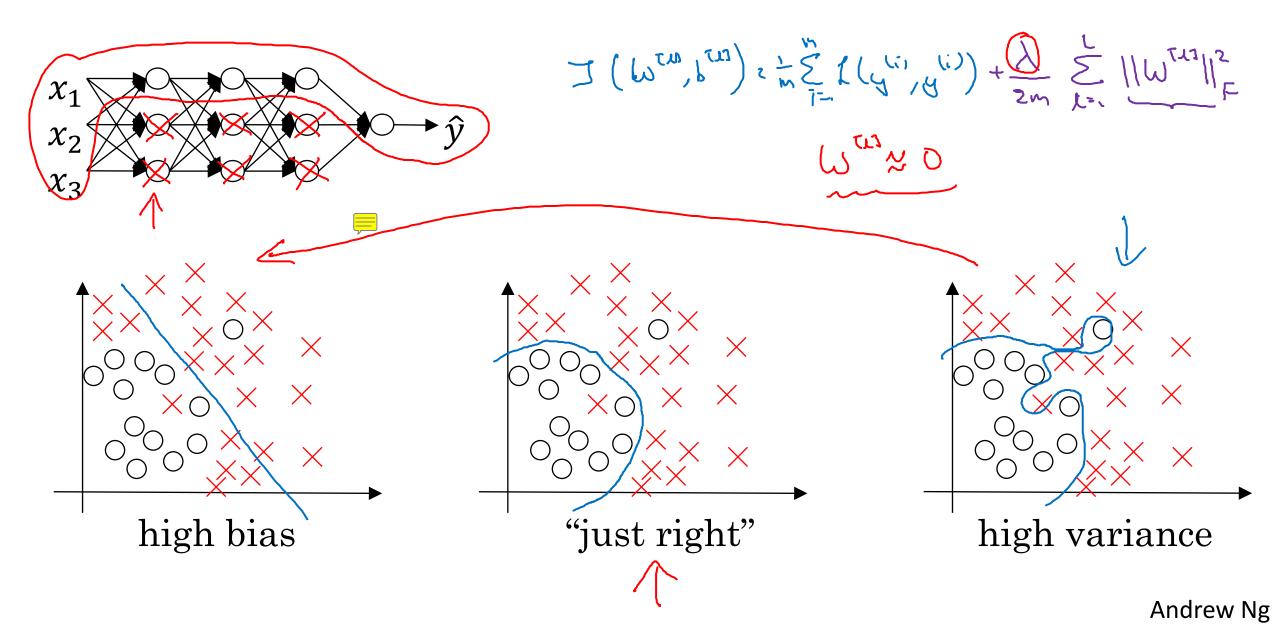

$$\min_{w,b} J(w,b)$$
 $\lim_{w,b} J(w,b)$
 $\lim_$

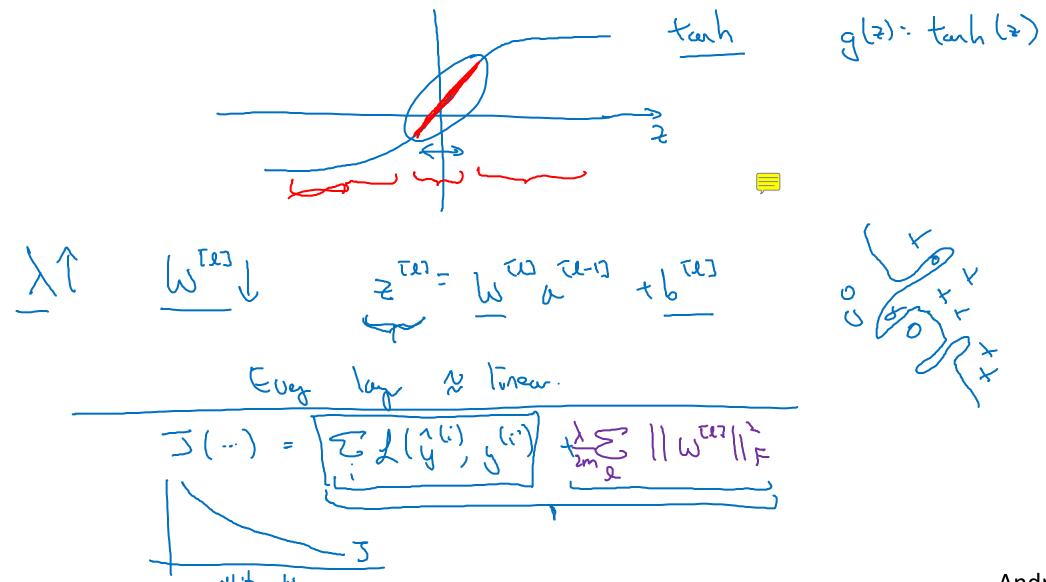

Regularizing your neural network

Why regularization reduces overfitting

How does regularization prevent overfitting?

How does regularization prevent overfitting?

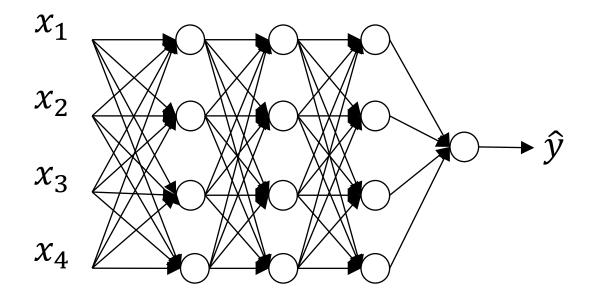

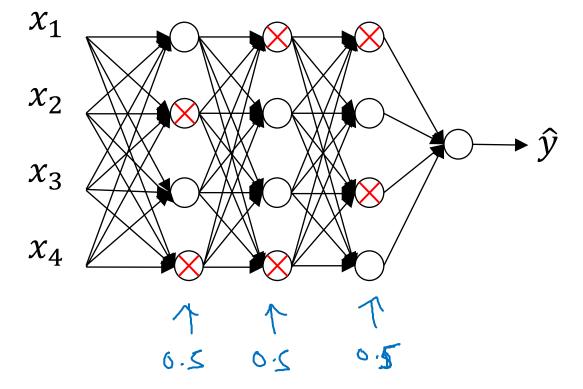

Regularizing your neural network

Dropout regularization

Dropout regularization

Implementing dropout ("Inverted dropout")

$$\Rightarrow \overline{D3} = np. \, random. \, rand (a3. shape To3, a3. shape To3) < \text{keep-prob}$$

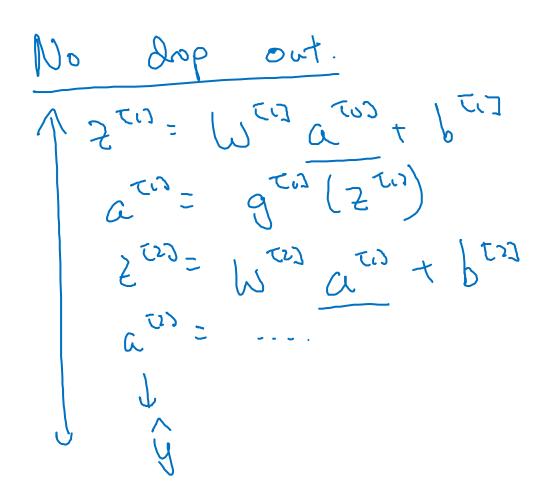

$$a3 = np. \, \text{multiply } [a3, d3) \qquad \text{# } a3 \text{ # = } d3.$$

$$\Rightarrow \overline{a3} /= \frac{a3}{a3} \text{ keep-prob} \leftarrow$$

$$50 \text{ units. } 10 \text{ units. } \text{shut. off}$$

$$2^{T43} = W^{T43} = W^{T43} = U^{T43} = U^$$

Making predictions at test time

/= keap-pols

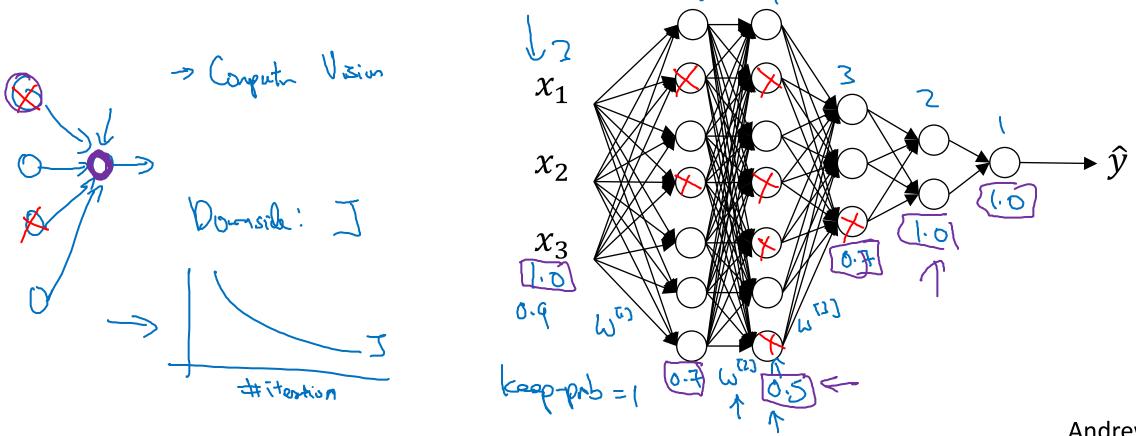

Regularizing your neural network

Understanding dropout

Why does drop-out work?

Intuition: Can't rely on any one feature, so have to spread out weights.

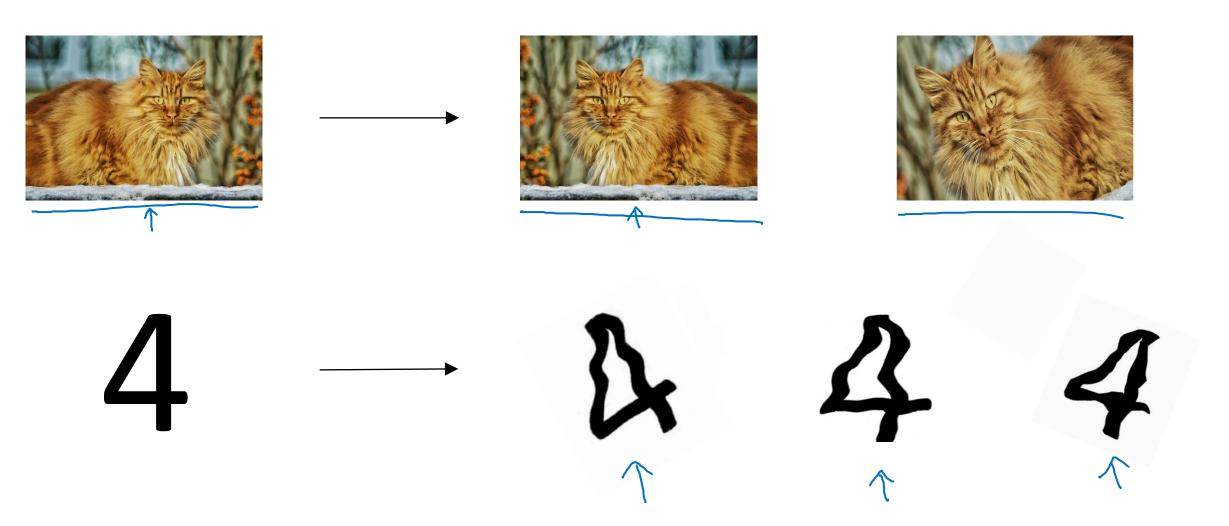

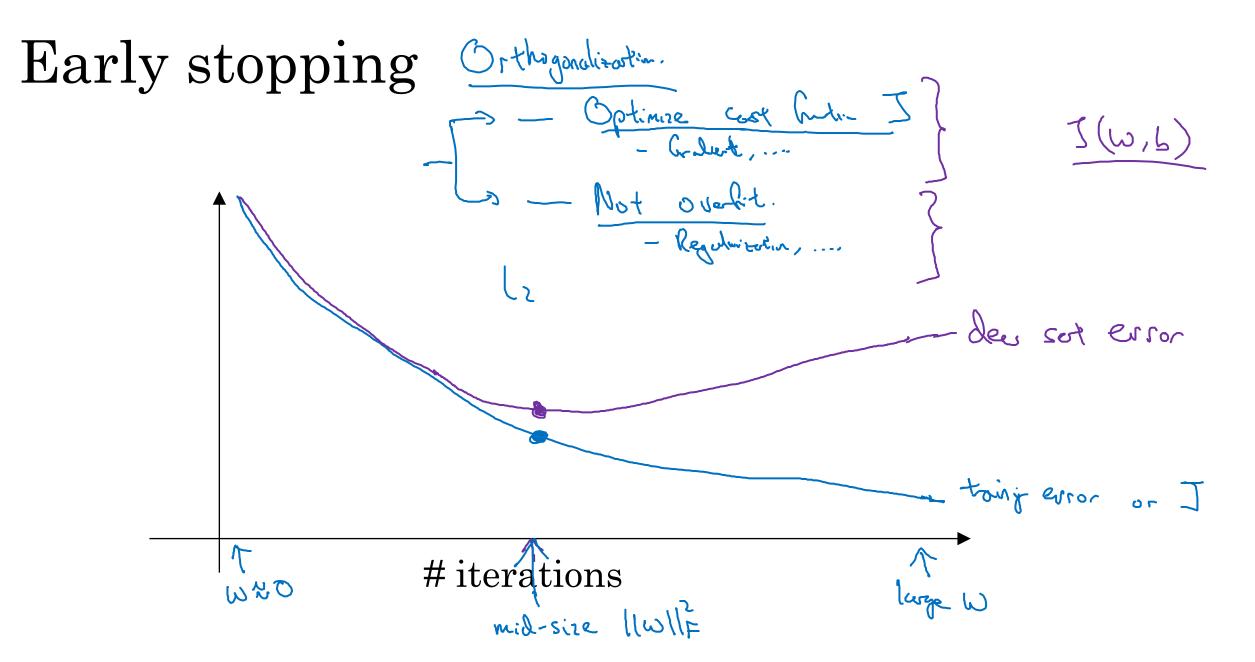

Regularizing your neural network

Other regularization methods

Data augmentation

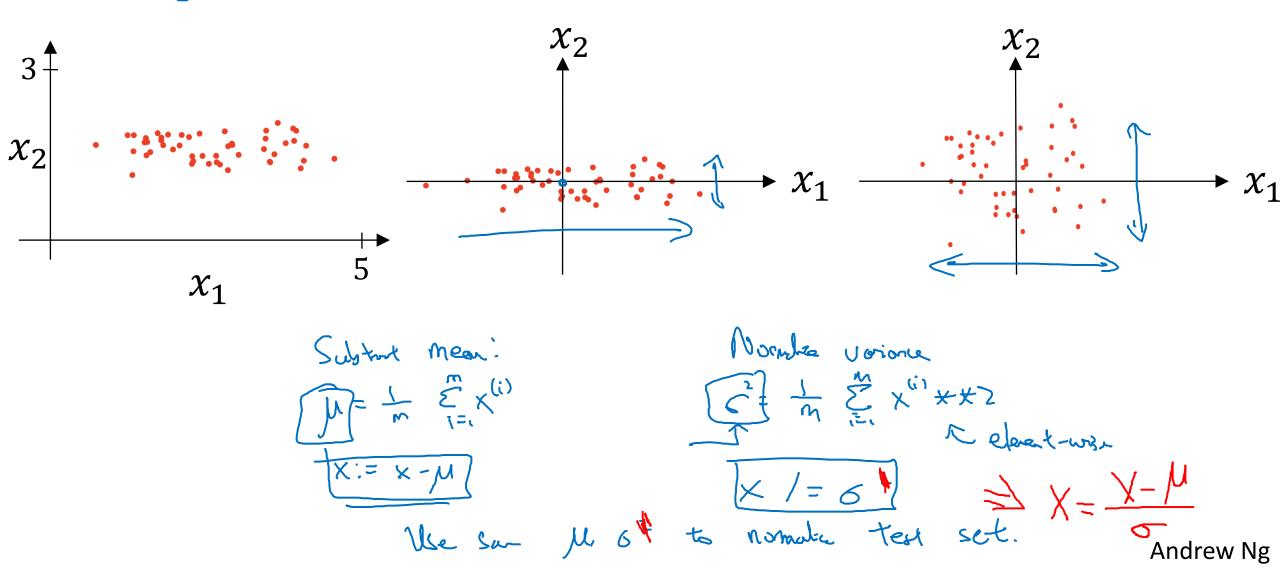

Setting up your optimization problem

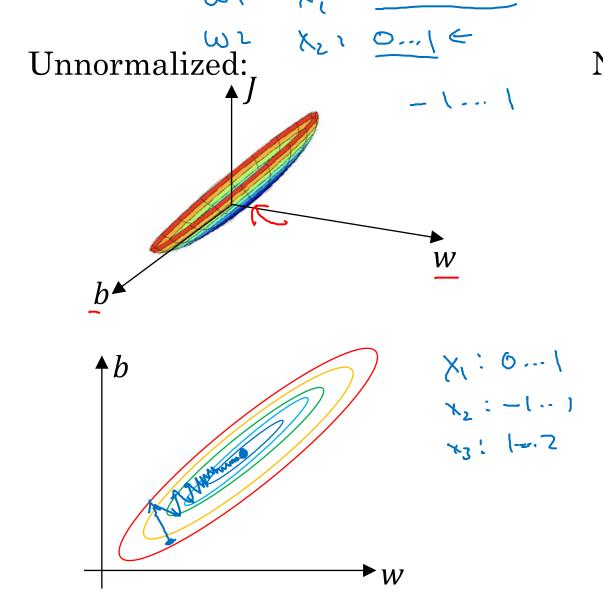

Normalizing inputs

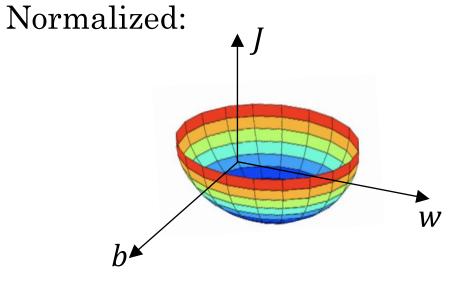

Normalizing training sets

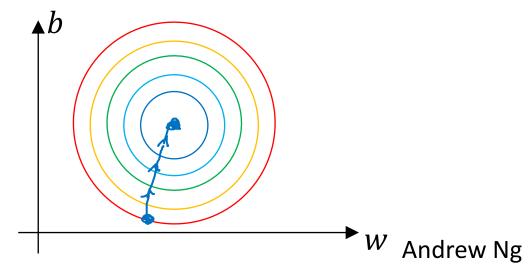

Why normalize inputs? $J(w,b) = \frac{1}{m} \sum_{i=1}^{m} \mathcal{L}(\hat{y}^{(i)}, y^{(i)})$

$$J(w,b) = \frac{1}{m} \sum_{i=1}^{m} \mathcal{L}(\hat{y}^{(i)}, y^{(i)})$$

Gradient Checking

Gradient check for a neural network

Take $W^{[1]}$, $b^{[1]}$, ..., $W^{[L]}$, $b^{[L]}$ and reshape into a big vector θ . $\mathcal{J}(\omega^{CD}, b^{CD}, \omega^{CD}, b^{CD})^2 \mathcal{J}(\theta)$

Take $dW^{[1]}$, $db^{[1]}$, ..., $dW^{[L]}$, $db^{[L]}$ and reshape into a big vector $d\theta$.

Is do the gradet of J(0)?

Gradient checking (Grad check)

For each
$$\bar{c}$$
:

 $\Rightarrow \underline{dOcij} = \underline{J(0_1,0_2,...,0_1+\epsilon,...)} - \underline{J(0_1,0_2,...,0_1-\epsilon,....)}$
 $\Rightarrow \underline{dOcij} = \underline{JJ}$
 $\& \underline{JOcij} = \underline{JJ}$
 $\& \underline{JJCij} = \underline{JJCij}$
 $\& \underline{JJCij$

Setting up your optimization problem

Gradient Checking implementation notes

Gradient checking implementation notes

- Don't use in training — only to debug

- If algorithm fails grad check, look at components to try to identify bug.

- Remember regularization.

- Doesn't work with dropout.

- Run at random initialization; perhaps again after some training.
